

## **Conclusions of the NASE cours in Chiang Mai, Thailand**

**May 2019**

After the course, some participants give several opinions about the course:

I was reluctant to attend as I thought the course would be difficult but when I got here I liked the activities and gained confidence. A friendly atmosphere was created by the instructors.

Travelling a long way was difficult but we made friends with similar teachers and gained confidence in speaking English.

It is useful to be able to buy the components locally so that I can make demonstrations in my own school.

I had attended other NARIT workshops and was worried that the NASE course would be the same but it was very different and interesting. There is never enough time.

Need to adapt materials to changing availability. E.g. CDs, DVDs and analogue TV sets.

We all speak the teachers' language. It is particularly important to have activities that are relevant to classroom work. E.g. Earth, craters and spectra.

Winter workshops would give a better sky!

NASE visitors thanked all the NARIT staff and Local Organising Committee for their wonderful cooperation.
