Very Useful	Useful
79%	21%

### Main criticism:

Nothing	Send information with more time and clearer
80%	20%

Nothing	Send info
---------	-----------

### Appreciate the most:

The teaching quality of the exhibitors. Excellent!

The workshops were great, they teach us practices that we can do with materials we have at our disposal.

The delivery and the love that the exhibitors showed for the astronomy.

The organization, the treatment to the participants, the materials provided. I found everything very good.

The development of the didactical material, the students were always motivated thanks to it.

The level of the teachers is spectacular, and the humility with what they taught us is wise.

### Other observations:

I would like to assist to other courses to continue learning.

I came through a provision of my superior and did not know what it was about. I came to stay only for 10 minutes but your interest was so big that it caught me so much that I finally have not missed a single minute. The course is simply spectacular.

I liked everything, but the workshops really impacted me.

Do not forget us, come back again soon. We will be in touch. Farewell.

That these courses carry out at least twice a year.

Thank you for the gift of knowledge. God bless you with many life, health and time to make this work.

Thanks to this course I could, apart from learning, clear a lot of doubts about the universe.
