

## **Conclusions of NASE Course of Astronomy**

### **Delhi, India 2022**

The sessions were very interactive, the basics and workshop concepts were explained properly for different age groups how to explain.

These types of workshops will be very good to introduce in schools so that students can understand how things work, and it is interactive DIY activity for all.

The materials are not readily available in villages, like aluminum foils, sticks, globe (and globe is costly at stationary) so need to find alternate for the same for school kids.
