

Conclusions ASTRONOMY COURSE

Delhi, India, 2021

The conclusions for the course expressed by several participants during the closings session were:

- 1) I am very satisfied. The course is very well explained and there were many simple activities. I would like the course to be translated in our languages.
- 2) All activities were very interactive. It's a very good course online in these conditions of lockdown. I'd like to attempt the next NASE course - Astrobiology and of course it's very interested to follow a special Astroculture course with Indian Astronomy Heritage topics.
- 3) It's very well we can understand the course in English.
- 4) I am an astronomer and I am very happy I found in this course many simple hands-on activities for children. They can learn many astronomical notions through these activities. I'll repeat them in addition to the sky observation with the telescope.
