

Conclusion of NASE COURSE ARGELIA, 2021

In the closing session, after the course, participants expressed their suggestions. There were several comments:

- Nothing is open to criticism. We want a longer and detailed training with a teaching support strong enough to learn to apply these teaching methods with the pupils and the children.
- The duration of the training could have been longer, so as not to skip certain theoretical information during the conferences.
- Reduce the training time a bit, and put it in two or three parts.
- It is excellent the large number of activities that participants can do
- I really enjoyed the training, it was at the top, thank you
- The best were the workshops, the group spirit among all the participants, the participants' passion for science in general
- Almost all the parts are appreciable including astronomy which seems intended for different school levels
