

CONCLUSION

NASE course, 2022 Istanbul, Turkey

First of all, thank you very much for the Astrophysics education.

In this training, the participants liked the workshop part, which will make it easier for the students to understand the events in the universe. The information and the applications behind it were works that made those facts clear.

One of participants mentioned: "I took the printouts in this training, but I had some shortcomings in some materials. The fact that these materials and activity papers were ready in kit form could have made things even more fun and instructive. Maybe such kits can be sold to those who want them. However, although not directly as a kit, all the application materials provided were easy to find and easy to do, but were very full of the information in it. "

Thank you again.
