

Conclusions ASTROBIOLOGY COURSE

THAILAND, 2020

The NASE Thailand online edition was joined by more than 130 teachers. In Thailand, astronomy is a compulsory course in school curriculum, and therefore teacher training is essential to for teachers, in particular the practical sessions and hands-on activities introduced in the NASE course were very much welcomed by the Thai teachers, many of them mentioned they will conduct these activities in their classes, and fits well the content they are asked to teach.

It is the first attempt to conduct online teacher training in Thailand, and unlike people's thought, even though it was an online edition, there are still lots of hands-on activities teachers can do by themselves through remote online teaching. Overall, it is a very successful attempt during the new normal era.
