

Conclusions

NASE Course in Turda

At the end of the NASE course the methodology of the course were discussed. In general the participants considered that the contents were very useful for them

The teachers for the primary school were very enthusiastic and were very surprised that the course was not with much theory but with practical activities.

The teachers were very open and they asked me questions about how they can make the experiments - for example for the spectrometers.

It was considered that the course was very interesting and very good.
