

Conclusions ASTROBIOLOGY COURSE

Busher, Iran, 2020

The NASE course was very useful and helpful. Teachers can use the activities in their schools and the students will be surprised. The materials and activities were very interesting. Teachers were full of energy during the course. We are very grateful to Rosa and Corina.

In Iran, we had some problems with Google Meet and it has been challenging for us because sometimes we had some connection problems.

The time of the course may increase. The duration of the course was short. We didn't have much time to review the materials to ask questions and doubts. It will be better if we can ask questions two days after.

It might be very useful recording classes, so participants can watch the movie again after the course and learn more. Being able to send activities to teachers after the course will allow us to learn more.
