

Conclusions NASE Astrobiology course no. 174, Cluj-Napoca, Romania

The course contains a lot of scientific information but very clear and structured, easy to understand and very intuitive. I'd like the course to be longer in time.

In this pandemic situation it was a pleasure to have an international course online about astrophysics connected with astrobiology.

We observed from the first workshops the enthusiasm of the instructors and their very simple experiments and complete explanations.

In Romanian school the subjects Physics, Chemistry, Biology and Mathematics are studied separately but this course showed us how we can connect them through simple experiments.

I learned so many experiments. Now I can show to my students the different properties of electromagnetic waves and how the researchers can find an exoplanet that can have life-sustaining conditions.

Thank you for this course. I found out so much information in so short period of time. I liked especially the easy experiments that can be done in the classroom with cheap materials. Practical activities really transform any science in something much easy to understand and more pleasant for students.
