

Conclusions NASE course no. 176, Egypt

There were several comments from the participants and instructors during the course and the closing session. Here there are several examples:

- Thank you very much, there very important issues and experiments.
- I liked especially the simple experiments that I can use in the primary school. I am glad I took this course.
- It was to short time for each activity but I like the fact that we can use these results, methods in classroom activities.
- Thanks and congratulations to the whole team for this professional development opportunity.
- The demonstrators are very important tools we can use to teach our students about the stars we see in different seasons, about the Sun trajectory or planets motions relative to the Earth.
- The students can learn a lot from these experiments and repeat them at home if they are curious.
- I would enjoy to participate in future NASE courses. Thank you all for organizing this course and making it possible for us.
