

Conclusions NASE course Philippines

There were several comments from the participants and instructors during the course and the closing session. Here there are several examples:

- I am having a hard time. If you are having a hard time, it means that you are learning, keep it up!!!
- Very interesting presentations. Very informative. Thank you very much
- I was clarified about eclipses; the activities helps a lot. Misconceptions were clarified. Thank you very much for these lectures
- Thank you po... I learned so much
- Very much excited to use the materials not only to my astronomy club but also to my classes
- Things I learned is of great help especially in my classes
- Thank you so much NASE for this wonderful activity/workshop
- Cant wait for the next science camp to introduce this to my students
- Learning by doing is very interesting to our students... thank you very much
- Ready to use the models and kits to my science class soon. Thank you very much to NASE and YMSAT
- Thank you for these workshops and for generously sharing your teaching materials especially the idea of Astro Briefcase. We'll adopt it in our school and make version of that in bio, chem and physics.
- I learned the apparent movements of stars and the Sun as seen from different latitudes and the Moon's movement and shapes as seen from different latitudes. Today, I learned the importance of careful observations in Astronomy, the use of various instruments through the student's construction of the instruments like spectroscope. The activities are very interesting ad engaging I will highly recommend this to my colleagues in Senior High School Department.
- I love teaching Astronomy now. This is a PWA with use learning kit (briefcase). Thank you so much for your generosity.
- Congratulations organizers! Thank you very much NASE
- Congratulations for all of you
- This workshop gives me new insights on astronomy that can give passion to everyone. Thank you to all of you. Thumbs up! God bless you all :).
