

## **Conclusions ASTROBIOLOGY COURSE**

YEKATERINBURG, 2020

Attendees do not ask many questions during the online workshop.

However, at the end, some open the cameras and state that they really enjoy all of them, even exclaiming that they are fantastic. They confirm that they will be able to apply the experiments with the materials shown with their students.

Despite the abstract content, they are of the opinion that their teenage students will also be able to understand the concepts.

They comment that Astronomy is a matter differentiated from Physics and, moreover, compulsory in Russia.
