

Conclusions ASTRONOMY COURSE

IRAN, FARS, 2021

at the end of the course and closing session participants expressed their suggestions. Here are several examples:

- I am a physics teacher and I am participating in the NASE course for the second time. Thank you for the course.
- Ms. Rosa changed my view of astronomy, and I now look carefully at the sky and even at historical structures.
- Practical workshops help students learn astronomy, and the important thing is that students can make tools at a very low cost.
- NASE is my favorite because it takes a fresh look at astronomy education.
- The tools were very interesting. We better understand the science we read in books by making these tools, and we can better teach these topics to our students.
- The course was great for me, especially the workshops where we built the tools because now I have learned an easier way to explain astronomy to my students.
- I liked the course and thank the instructors.
