

Conclusions ASTRONOMY COURSE

ATHENS, GREECE, 2021

At the end of the course, in the closing session, the participants expressed several comments. Here we present some examples:

1) Thank you very much, the experiments are very interesting and they help us to teach in the future.

2) I am very glad because I followed this course. I studied the demonstration of the Aristarchus' equations but the mathematical formulas were very difficult. In your course, the demonstration is very simple and I will use it with my students because they will understand easier.

3) The models and the experiments are made with cheap materials and they are simple to build or make too. They are suitable for use at any level in schools

4) It is so nice to make a course with people who have the same passions like us.

5) The course was really-really good!!

The Astronomy is not a subject in school (like also in other countries) and the (Greek) teachers are very upset about this.
