

Conclusions ASTROBIOLOGY COURSE

Delhi, India, 2021

During the course there were several comments about the course, and at the end of the course mentioned, in the closing session, there were some comments more.

- 1) The course is very well interesting but I am not sure that we can find all the materials necessary for several activities.
- 2) Another participant said that the activities can be prepared in India. There are the materials that were used, yeast, vinegar, ethanol etc...
- 3) I imagined that it will be more biology in this course.
- 4) I am a teacher and I believe that my students can learn many astronomical notions through these activities. I'll repeat them in my classes.
