

## Conclusions ASTROPHYSICS Course

Busan, SOUTH KOREA, 2021

Teachers' feedback. After the course, record what everyone said one word at a time

- I like that the activities are practical and obvious. I have a plan to apply them to elementary science classes.
- The lecture, data, and video were very good. I really appreciate the workshop. I wish it was face-to-face
- Contents of Integrated Science and Earth Science I which are compulsory classes in high school of our country. Hands-on, easy-to-prepare materials, and video were impressive for student understanding, and I hope it will be expanded in the region as well. Basketball and small balls seem to be very useful when explaining supernova and will be applied in class, Thank you a lot.
- Basic emphasis and easy-to-understand explanations. After the previous workshop in January 2021, the celestial sphere class was conducted and it was great fun. I am also impressed by the activity of solar luminosity determination and the infrared experiment was impressive. I'll do it in the class. Thank you so much.
- It was a great workshop and thank you so much. It was impressive to try different points of view through experimentation, and it was not difficult. It's good because it's an experiment that doesn't appear in textbooks. For experiments that require verification or preliminary preparation, 1) I need to check the theory of silicon scattering, 2) In the Herschel project, a thermometer was placed on a black plate, but it is also necessary to control the thermal radiation, 3) I use of rubber during space expansion activities due to different elasticity. However, after confirming that the expansion of the rubber is linear, it is necessary to proceed with the class
- Thank you so much for the workshop. It was a great idea of measuring the luminosity of the sun. I am now preparing for the astronomy class for the next semester. It allowed me to review before the semester.
- I was introduced to various materials, and the activities were particularly impressive.
- Opportunity to glimpse cultural differences and classes in other regions
- I think I need to work harder in English. It is impressive that foreign experiments and basic experiments were explained in detail.

It was again a wonderful workshop and the participants enjoyed it a lot and will bring it back to the classes.

Here are the sentences we've to chat about after the workshop.

There are so many greetings and thanks a lot.
